## TUBE FITTING INSTALLATION

### LEARNING OBJECTIVE

Learn everything about the operation, assembly, and installation of Swagelok fittings. Correct installation is essential to avoid leaks, waste, and costly repairs, and to ensure safety.

### FOR WHOM?

Technicians, installers, technical engineers and buyers, supervisors, operators, quality and safety personnel.

### CONTENT

Topics covered include: installation of tubing, preventing leaks in tube fittings, design features, intermixing, threaded connections and installation, and tips to work more easily with fitting products.

The training is from 8:30 AM to 4:00 PM. In the morning there is a theory session, and in the afternoon a practical assignment.

After successful completion, you will receive a certificate and a Swagelok registration valid for 3 years.

- Is your fluid- or gas application safe?
- Are you certain that your applications do not leak?
- What are the risks of fluid- or gas applications ?

## TUBE FITTING BENDING TECHNIQUES

### LEARNING OBJECTIVE

Do you work with tubing often? Then it is important to master not only the theory, but also the practical skills of tube bending. You will learn to apply the measure-bend method — a technique that ensures precise bends, fewer leak points, and a safe working environment.

### FOR WHOM?

Maintenance engineers and managers, installers, technicians, technical engineers, supervisors, and integrators.

### CONTENT

Carefully cutting and deburring tubing. Bending tubing at the correct angle and in the correct location. During the theory and practical assignment, you will also learn to recognize and prevent bending defects.

The training is from 8:30 AM to 4:00 PM. In the morning there is a theory session, and in the afternoon a practical assignment.

After successful completion, you will receive a certificate.

## TUBE FITTING INSPECTION

### LEARNING OBJECTIVE

An incorrectly executed installation can lead to leaks, downtime, and unsafe situations. That's why it is important to know how to assess the quality of an installation or application. You will learn to identify and correct errors at an early stage, before they lead to problems.

### FOR WHOM?

Quality, HSE and safety personnel, operators, technicians, maintenance and service engineers, contractors, and end users.

### CONTENT

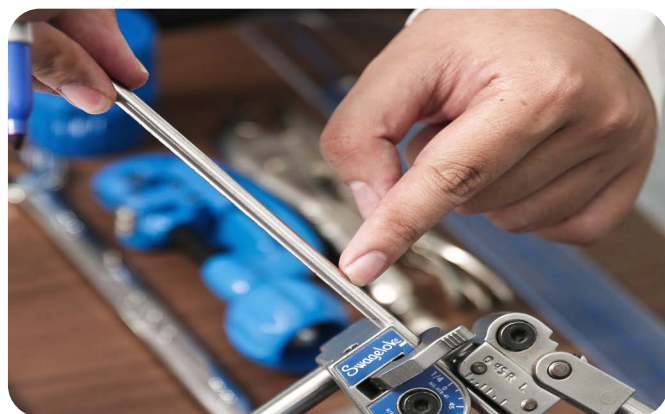

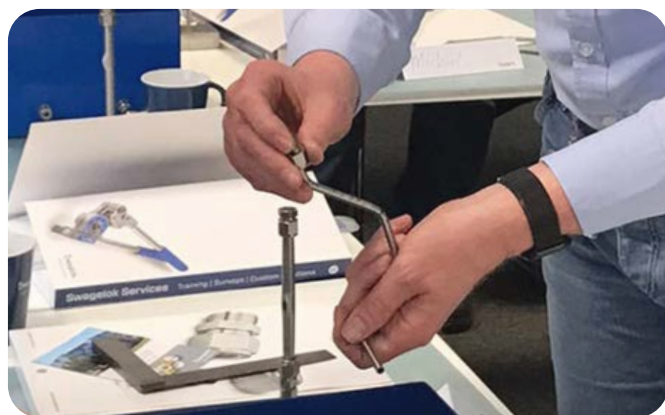

Learn how to assess an installation or application, which components you need to inspect, key points of attention, and how to prepare a professional report. The training includes a practical exercise for immediate application of this knowledge.

The training is half a day from 8:30 AM to 12:00 AM.

After successful completion, you will receive a certificate.
